Solutions

**Cloud Migration Made
Easy for Government
Agencies**

The Client is part of the Dallas–Fort Worth metroplex, the fourth-largest metropolitan area in the United States. The county is home to a diverse economy, with major industries including aerospace, defense, energy, healthcare, and logistics.

In 2022 the client was facing a challenge. One of their existing on-premises applications was outdated and no longer meeting their needs. They needed to find a way to transition to a cloud-hosted environment, but they needed a company with expertise in AWS GovCloud, that was ITAR compliant.

Finding the Perfect Cloud Solutions Provider

After going through an RFP process, The client chose Resolve Tech Solutions (RTS) to help them with their transition. RTS has a proven track record of success in migrating and managing complex applications to the cloud with years of experience in working with government agencies.

During the process RTS' breadth of expertise encompassed a range of tasks, including sizing the on-prem environment, designing the VPC, configuring security and finally the seamless migration. The on-premises application was moved to a hosted cloud environment while adhering to ITAR compliance standards. This was achieved by setting up a VPC and providing a fault tolerant multi-availability zone design.

The success of this migration led The client to entrust RTS with additional services. Post-migration, RTS now provides hyper-care with 24/7 monitoring of the cloud environment. This includes the ongoing management of 12 large servers.

20 – 50% cost savings by moving application to cloud
